Expansive worktops with rounded corners

Sector:	Kitchen Retail
Room Type:	Domestic kitchen, Dorset
Specifier:	Best Kitchens
Contractor:	Bestkitchenonline.co.uk

A Somerset based kitchen designer and supplier of bespoke appliances, as well as units and islands, has called on the services of GEC Anderson for the fit-out of her own home.

The 1990s property was actually constructed to blend in with its village location and is now nearing the end of a full internal refurbishment, carried out by Julie Parker and her partner, with the kitchen/utility being the final areas that they tackled. With more than a decades experience of designing and sourcing kitchen interiors for clients, Julie was fully confident in working with GEC for a project which required nearly 30 metres of made-to-measure stainless steel fabrications.

These included an integrated sink, drainer and food preparation surfaces beneath the window, surrounds for the restored Aga cooker, a continuous run along the opposite wall and the top for a large central island - as well as work-surfaces throughout the adjoining utility room.

All were produced to a relatively short timescale and delivered to site by a carrier with a vehicle chosen to suit the property's comparatively inaccessible location.

Julie Parker comments: "The kitchen is the biggest and last project, involving moving the Aga to one side, creating the island and adding a lot of new storage space. I had come into contact with GEC originally through my work as a kitchen designer and had always been impressed by the company's speed of response. They always get back to you promptly and there are no unnecessary delays in delivering your order."

Founded in England in 1962, GEC Anderson has pioneered the development of made-to-measure stainless steel products. Today, the company's range also includes standard and modular stainless steel options. Products include sinks, worktops, cabinets, shelving, splashbacks, doors and sanitaryware for use in domestic, commercial and specialist environments. All products are manufactured to ISO 9001 and backed by a comprehensive support service from planning and product specification to installation and maintenance.
